

MISSION-READY POWER

No Tools. No Training. No Delay.
Modular Power Supply (MPS)

Shore AC In
Shore DC In
Vehicle DC In

600W AC

600W DC

DC to 600W AC Inversion

Power Distribution

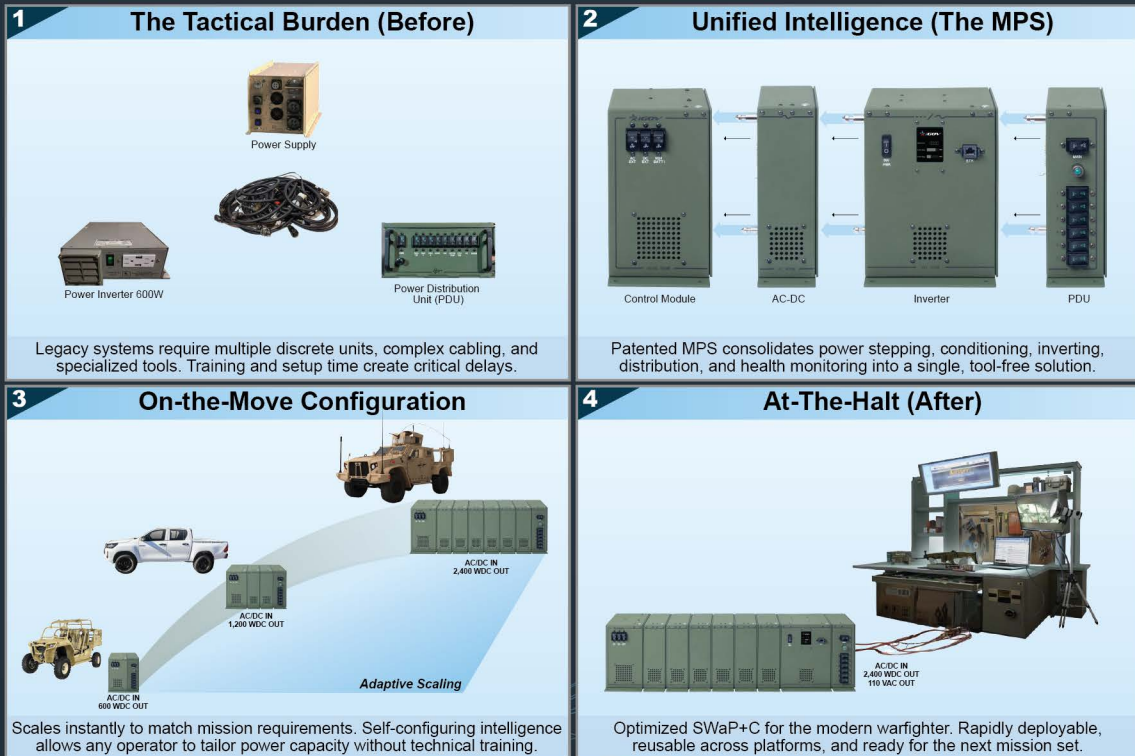

- **Integrated Power Intelligence** – A patented, all-in-one solution for power conditioning, inversion, distribution, and real-time monitoring
- **Mission-Adaptive Modularity** – "Design for Deployment" allows operators to toollessly scale and reconfigure hardware across diverse platforms and mission sets
- **Optimized SWaP+C** – Significantly reduces footprint and cost by consolidating four discrete power systems into a single hybrid management unit
- **Zero-Training Deployment** – Push-button assembly and instant self-configuration ensure immediate readiness for any operator, in any environment

Available on the NASA SEWP V Contract Vehicle

From Complexity to Combat-Ready in Seconds

The Suite Consists of:

- CONTROL module (I/O Interface w/Circuit Overrun Protection, Power Stepping, Conditioning, and Switching)
- INVERTER module (DC to AC Inversion, Charging, and Health Monitoring & Reporting)
- POWER modules (Scalable from 600W to 2,400W)
- PDU module (Power Segregation, Circuit Overload Protection, and Distribution)
- Universal Mounting Kit (Transit Case, Base Plate, Rollbar, and Seatbelt Mounts)
